-- 43. A method of lowering the amount of an endogenous substance in an extracellular fluid of a subject, comprising administering to the subject a chimeric protein comprising a functional domain and a carrier domain, wherein

the functional domain comprises a ligand-binding domain of a first receptor, wherein the ligand-binding domain binds an endogenous substance;

the carrier domain comprises an amino acid sequence which binds a mammalian cell surface receptor other than the first receptor,

such that the chimeric protein binds to the endogenous substance in the extracellular fluid of the subject and to the cell surface receptor on the cell, whereupon the cell
